

Caring People. Improving Lives

Product catalog
2024

our vision our mission

We believe healthcare is first and foremost about quality of life. Medical treatments are more than just procedures, they restore health, comfort, confidence and happiness and improves life of millions of patients every year. Our vision is to pave the way of a more human-centered healthcare industry based on proactive lifetime care.

To remain at the top of their game and focus on what matters most, healthcare professionals trust integrated solutions that empower them and improve their practices on a daily basis. We provide comprehensive, intuitive workflow solutions that put technology at the service of people and help healthcare professionals restore patients' health effectively, efficiently, and economically.

About Prophylaxis workflow

This combination of solutions helps dentists easily prevent and diagnose potential dental problems such as periodontal disease and tooth decay. It also allows to perform safe and minimally invasive procedures, providing best care and comfort for patients.

Diagnosis

To ensure a reliable diagnosis, I need to get a quick and clear view of initial signs of caries, periodontal disease, and other conditions.

C50 intraoral camera is the perfect companion for non-invasive and reliable caries detection, thanks to its fluorescent technology.

Treatment

I wish to carry out fast and accurate treatment, while reducing hand fatigue.

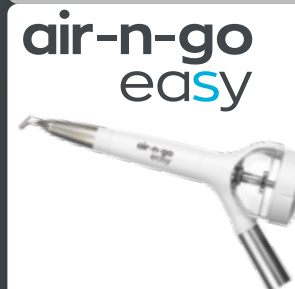

Newtron® P5XS B.LED and Bliss™ is the perfect combo to preserve tissues with efficacy and precision. Less force is needed for more comfort.

Air polishing

It is important for me to control the progression of the disease, without neglecting the comfort of my patient.

With Air-N-Go® easy, provide a gentle and effective treatment that limits bleeding. Stains and bacterial plaque are removed even in hard-to-reach areas.

Follow-up

In order to educate my patients for better treatment acceptance, I need to highlight the results of my dental care.

C50 provides a reliable and immediate check of the clinical condition. The images can be shown to the patient and saved to his file.

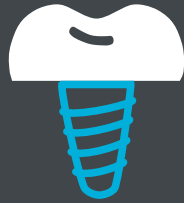

Protection

I need to ensure optimal clinical protection for my patients and limit the risk of cross-contamination.

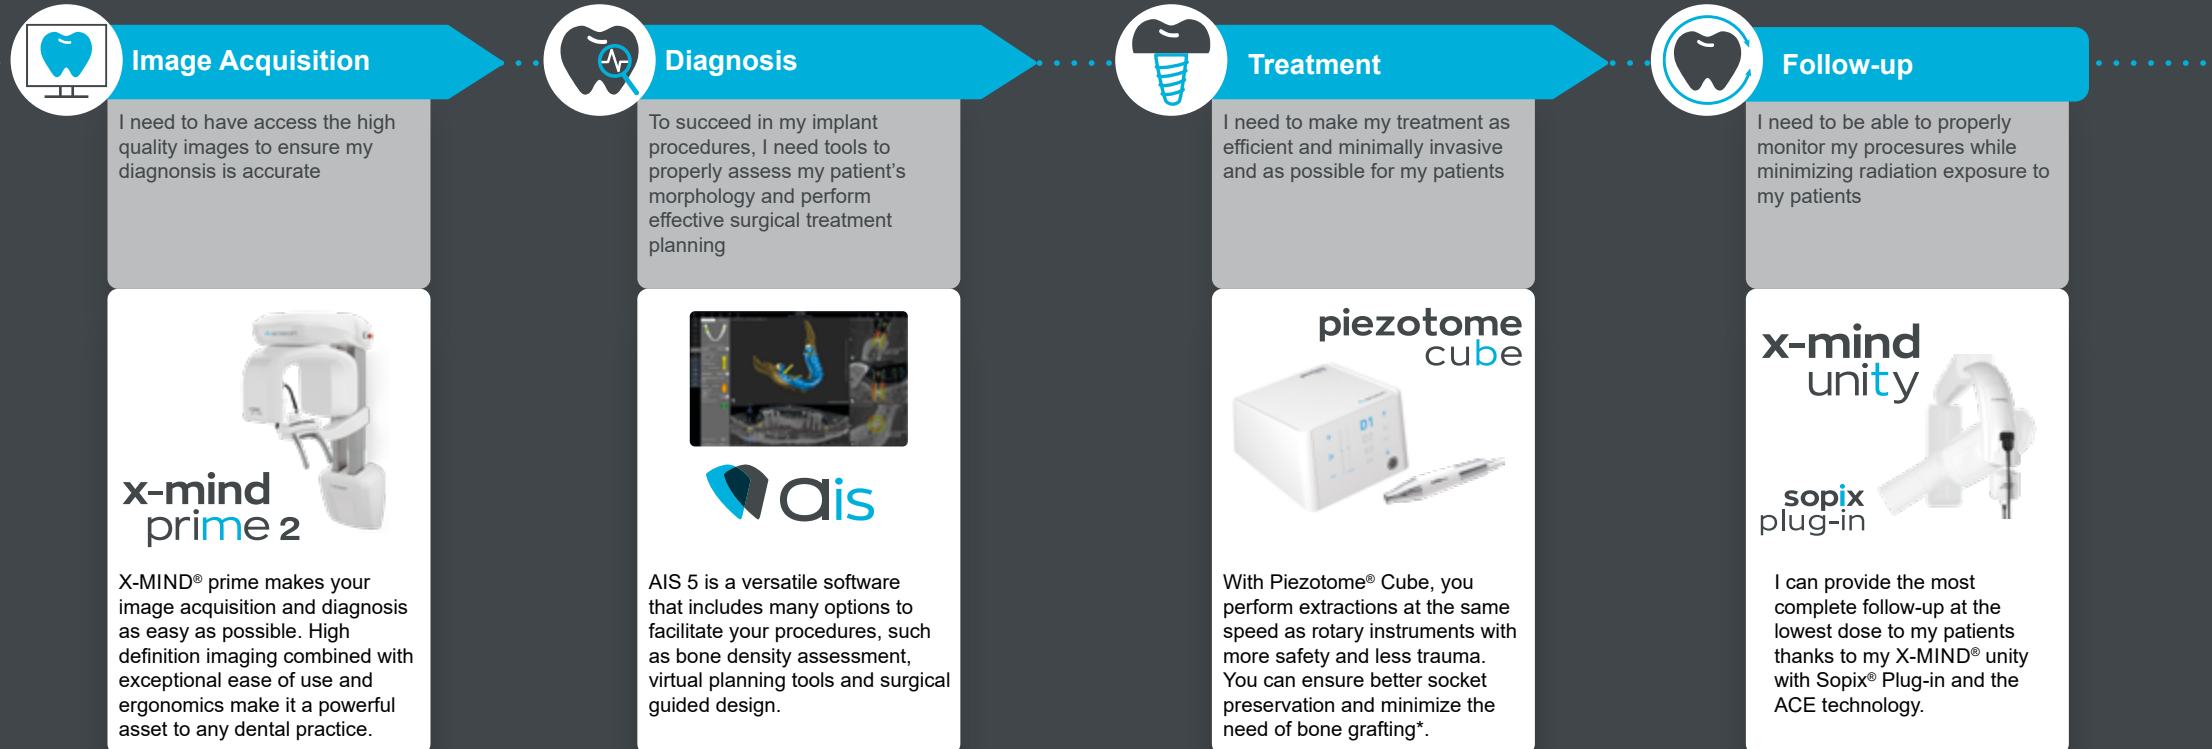

riskontrol

Riskontrol® disposable tips are your must-have solution to perform dental care in a safe and clean place. It assures protection, comfort and safety in every daily clinical procedures.

About Implantology workflow

ACTEON®'s implantology workflow leverages its expertise in different areas of the dental care pathway to help practitioners address some of the challenges associated with implantology to facilitate treatment, reduce treatment costs, increase surgical success, reduce chair time and improve the patient experience.

* Troedhan A, Kurrek A, Wainwright M. Ultrasonic Piezotome surgery: it is a benefit for our patients and does it extend surgery time? A retrospective comparative study on the removal of 100 impacted mandibular 3rd molars. Open Journal of Stomatology. 2011;1:179-184

About Prosthesis workflow

ACTEON® digital prosthesis workflow allows practitioners to create effectively both functional and aesthetic smile, and to ensure patients' satisfaction. When it comes to complete prosthetic procedures, our top-of-the-range and innovative products help dentists to perform precise and predictable procedures while delivering the best patients' treatment experience.

Diagnosis

I need to have access to the high quality images to ensure a reliable diagnosis.

X-MIND® prime makes your diagnosis as easy as possible. High definition imaging combined with exceptional ease of use and ergonomics make it a powerful asset to any dental practice.

Preparation

I need to preserve teeth for a maximal efficiency and an optimal comfort for my patient.

Benefit from Newtron® device ultrasonics technology to achieve precise and effective treatments. Our Perfect Margin™ tips are designed to vibrate efficiently, ensuring maximum and continuous performance for patients' satisfaction.

I need to make my preparation as efficient and minimally invasive as possible for my patients

expasyl
exact

Achieve painless and effective preparation and facilitate access to the preparation limits with Expasyl™ Exact to guarantee the most natural looking and performing prosthesis.

Follow-up

I need to highlight the results of my dental care.

The C50 with AIS give patients a clear view of their condition, enabling them to understand the diagnosis and treatment proposals of their dental professional.

Protection

I need to ensure optimal clinical protection for my patients and limit the risk of cross-contamination.

riskontrol

Riskontrol® disposable tips are your must-have solution to perform dental care in a safe and clean place. It assures protection, comfort and safety in every daily clinical procedures.

AIS	30

Easy is the new smart!

- Easy 2D diagnosis
- Easy patient positioning
- Easy user interface
- Easy installation
- Easy to use

x-mind prime 2

RELY ON A COMPLETE SET OF PANORAMIC EXAMS

X-MIND® prime offers a full set of panoramic exams for both adult and child, tailored to meet all your clinical applications:

- Panoramic
- Examination of the temporomandibular joints
- Examination of the maxillary sinuses
- Half-panoramic
- Improved orthogonal panoramic
- Detailed frontal dentition
- Low-dose panoramic
- Bite-wing

POSITION EASILY AND EFFICIENTLY YOUR PATIENT

Natural face-to-face positioning supported by alignment lasers for correct patient positioning.

X-MIND® prime is based on a fix & lift principle. Whether sitting or standing, the telescopic columns can be directly adjusted using the control panel.

Its open space configuration suits almost all types of patients and is easily accessible for wheelchair users, thanks to its zero footprint design.

SIMPLE CONTROL PANEL

The simplified control panel, smartly located below the chin support, provides a streamlined and precise patient positioning.

Benefit from an error-free patient positioning thanks to the automated chin rest support recognition.

THE BRAND VERSION WITH CEPHALOMETRIC ARM

Easy, reliable and safe mobile sensor handling

CEPHALOMETRIC RADIOGRAPHY

With the ACTEON® X-MIND® prime CEPH, you can extend the fields of application of the device to orthodontic analysis, improving diagnosis and treatment planning.

2 AVAILABLE CONFIGURATIONS:

- X-MIND® prime PAN CEPH
- X-MIND® prime PAN 3D CEPH

X-MIND® prime Pan 2D

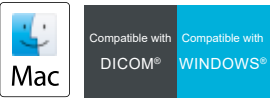

Orthopantomograph (OPG), 110V–240V, with one CMOS Pan 2D sensor for panoramic imaging.

- 24 adult and child panoramic programs
- Innovative wall-mounted system
- Face-to-face positioning
- Lightest unit on the market
- Installation under an hour by one single technician

ACTEON® Imaging Suite (AIS) streamlines any clinical workflow from patient data management to images acquisition. AIS 2DApp with its clean Imaging interface simplifies the diagnostic phase and allows a better communication with the patient with its portable viewer and dedicated image filters. All Acteon imaging devices can be integrated in the same AIS environment. Installation and user e-manuals, 2 years standard warranty. Not included: light.

Class IIb medical devices (IMQ) - CE0051
Manufacturer: de Götzen ACTEON® Group - Italy

2D Wall-mounted version 110–240V

W1200001

X-MIND® prime Pan 2D CEPH

Orthopantomograph (OPG), 110-240V with single mobile CMOS sensor for panoramic and cephalometric imaging.

- Lightweight and compact installation
- 39 adult and child acquisition programs
- Accurate and reliable patient positioning
- Fast and easy installation

ACTEON® Imaging Suite (AIS) streamlines any clinical workflow from patient data management to images acquisition. AIS 2DApp with its clean interface simplifies the diagnostic phase and allows a better communication with the patient with its portable viewer and dedicated image filters. All Acteon imaging devices can be integrated in the same AIS environment. Installation and user e-manuals, 2 years standard warranty. Not included: light.

Manufacturer: de Götzen ACTEON® Group - Italy

2D version 110-240V

W1200009

2D version Double sensor 110-240V

W1200009.DS

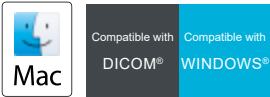

X-MIND® prime Pan 3D

- Orthopantomograph (OPG), 110V–240V,
with one CMOS PAN/3D flat panel detector.
- 54 adult and child 2D and 3D programs
 - Delivered with AIS 3D app and powerful treatment planning tools
 - 4 FOV : 50x50, 85x50, 85x93 and 120x100* mm
 - Innovative wall-mounted system
 - Face-to-face positioning
 - Lightest unit on the market
 - Installation under an hour by one single technician

ACTEON® Imaging Suite (AIS) Software, for visualization and analysis of 2D and 3D acquisitions and treatment planning. AIS 3DAPP PRO included. Compatible with all 2D and 3D imaging products of the group. Installation and user e-manuals, 2 years standard warranty. Not included: Light.

Class IIb medical devices (IMQ) - CE0051
Manufacturer: de Götzen ACTEON® Group - Italy

3D Wall-mounted version 110–240V + WS + Monitor

W1200005

* Optional

X-MIND® prime Pan 3D CEPH

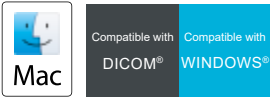

Orthopantomograph (OPG), 110-240V equipped with a CMOS PAN/3D flat panel detector and a CMOS 2D CEPH sensor.

69 adult and child 2D PAN/CEPH and 3D programs
Delivered with AIS 3D app and powerful treatment planning tools
4 FOV : 50x50, 85x50, 85x93 and 120x100* mm
Accurate and reliable patient positioning
Fast and easy installation
Software preinstalled.

ACTEON® Imaging Suite (AIS) Software, for visualization and analysis of 2D and 3D acquisitions and treatment planning. AIS 3DAPP PRO included. Compatible with all 2D and 3D imaging products of the group. Installation and user e-manuals, 2 years standard warranty. Not included: Light.

x-mind trium

true
low dose

- 3 in 1 System covering Pan, 3D and Ceph exams
- 3D Mapping of bone density
- 4 FOV: From 4x4 to 11x9
- Up to 50 % Dose reduction*
- 75 µm High-resolution image

FOCUS ON THE REGION OF INTEREST

X-MIND® trium offers you a broad selection of field of view, letting you focus on the region of interest for the target diagnosis and reducing the patient's exposure to X-rays:

ø 110x90 mm

ø 80x90 mm

ø 60x60 mm

ø 40x40 mm

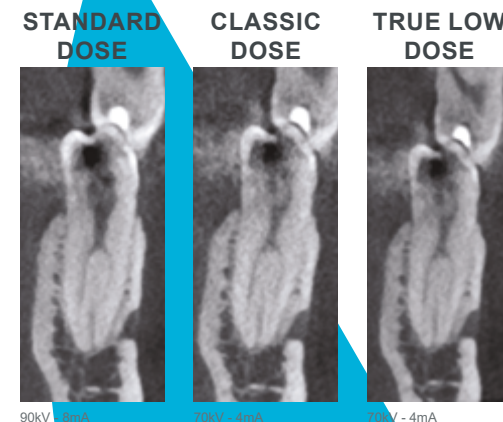

DOSE REDUCTION WITHOUT COMPROMISES IN IMAGE QUALITY

Up to 50%* dose reduction with TRUE LOW DOSE CBCT

True low dose helps to reduce the X-ray dose while preserving a high image quality. The unique True Low Dose solution is possible thanks to:

IMAGE ENHANCING ALGORITHM

With the new powerful algorithm, you can now decrease the X-ray settings (up to 50%) with peace of mind. Our Low Dose functionality on the 3D radiographic scan will reveal the same anatomical structures of the X-MIND® trium exam performed with the standard dose.

SMART SLIDE MOVEMENT

X-MIND® trium sensor cassette is sliding closer to the child's head during the exam. This allows to reduce the X-ray dose settings while keeping the exact same image quality as before.

BEFORE SLIDE MOVEMENT

AFTER SLIDE MOVEMENT

AN OUTSTANDING IMAGE QUALITY

The quality of the diagnosis and endodontic treatments improves significantly with the 75 µm resolution of X-MIND® trium.

X-MIND® trium TLD Pan 3D

Class IIb medical devices (IMQ) - CE0051
Manufacturer: de Götzen ACTEON® Group - Italy

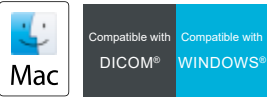

OrthoPanTomograph (OPG), 115-220V, with Flat Panel Detector for CBCT and panoramic imaging.

- Child-dedicated Panoramic and CBCT programs
- Low dose CBCT programs
- Improved Orthogonality
- TMJ section
- Maxillary Sinus exam
- CBCT FOV Ø40x40, Ø60x60, Ø80x90, Ø110x90

Software preinstalled on the provided workstation and monitor.

ACTEON® Imaging Suite (AIS) Software, for visualisation and analysis of 2D and 3D acquisitions and treatment planning. Includes five licenses for 3D app PRO, the 3D viewer and implant planning application. Compatible with all 2D and 3D imaging products of the group. Installation and user e-manuals, 2 years standard warranty. Not included: Light.

* The control panel can be placed on the right during installation according to the practitioner's needs

SMART DOSE

The ACE® technology protects both the image and your patient from unnecessary exposure.

SMART TECHNOLOGY

Our latest generation of digital sensors provide a sharp X-ray image for an easy reading of the different dental tissues.

SMART FLOW

Our mobile sensors adapt to all clinical cases, all morphologies and all software, to provide you and your patients greater comfort.

bliss

Superior comfort at your fingertips

The next generation of manual instrumentation

- Lightweight: 15g
- Unique "Soft Touch" grip
- Long lasting sharpness⁽¹⁾
- 100% approved by practitioners⁽²⁾

UNCONVENTIONALLY DURABLE AND SOLID

- High wear-resistance due to the stainless steel properties
- The metal is treated in accordance with the latest heating techniques

ENHANCED COMFORT THE FINAL GOAL

- High sharpness means less force
- Less force means less muscle fatigue
- Less force means comfortable scaling

Manual instrumentation video

TRUE ERGONOMICS

- 10mm: optimal handle diameter to reduce pinch force⁽³⁾
- 15g: ultra light to limit hand fatigue⁽³⁾

UNIQUE COMFORT

- Flat areas for the fingers, to avoid localized pressure
- Intrinsic tactile sensation

GENTLE AND CONFIDENT GRIP

- Effective «soft touch» non-slip surface
- Firm silicone with no spring effect for an accurate and controlled clinical gesture

REVOLUTIONARY COMFORT AT YOUR FINGERTIPS

42 instruments

- Diagnostic
- Restoration
- Periodontics
- Endodontics
- Prophylaxis

(1) The effects of periodontal instrument handle on hand muscle load and pinch force, D. Rempel; D. Lee; K. Dawson; P. Loomer; JADA 143 (10) - October 2012.

(2) Internal field evaluation on 20 practitioners from 8 different countries. 100% answered that Bliss handle was comfortable.

(3) Rempel D, Lee D.L., Dawson K, Loomer P. The effects of periodontal curette handle weight and diameter on arm pain. JADA. 2012 Oct;143(10)

Kits

Every consultation starts with these 3 instruments

One end of the handle is flat to facilitate percussive diagnostics, allowing to evaluate the sensitivity and the mobility of the tooth and the sensitivity of the gum.

Diagnostic kit Bliss®

Perfect clarity, crystal-clear vision

MOUTH MIRRORS – FROM DIAGNOSTIC TO TREATMENT, THE BENEFIT TO ALL DENTAL CLINICAL ACTS

- Visual examination is the first step to diagnostics
- 10 different sizes
 - From 0 to 6 to work in the mouth
 - From 7 to 10 to clinical studies, photography

MICROMIRRORS – THE MICROSCOPIC PERFECTLY VISIBLE

- Make the access to the apex easier and appreciate the accurate vision of the pulp chamber.
- 4 different sizes

PHOTOGRAPHIC MIRRORS – EFFECTIVE COMMUNICATION WITH PATIENTS

- Highlight the dental treatment and restoration to promote the practice. Allow to take pictures of clinical cases for books, publications and patient records.
- 8 different sizes for occlusal, vestibular and lingual areas.

endosurgery

Approaching endodontic apical micro-surgery with procedure-specific instruments

In today's world of minimally invasive solutions, the goal of dental treatment is to save the tooth before considering the extraction.

Manual instruments have a key role to play in endodontic micro-surgery; they need to fit the anatomical constraints of surgical sites in order to increase the chances of success of root canal retrofilling.

The Endosurgery Kit meets these requirements thanks to the well-adjusted instruments and micro-mirrors, providing clear and true image reflection and offering the benefits of the best optical chain from the microscope to the micro-mirror.

- 100% designed for apical micro-surgery
- Saving the tooth or the prosthetic reconstruction work
- Developed with 2 exclusive endodontists
- The best optical chain pre- & post-operative X-ray, Pure Reflect®

endosurgery essential

CHOOSING WHAT IS ESSENTIAL

- For practitioners who already have a standard surgery kit, we have gathered in one kit the 11 new instruments that are essential for apical endodontic microsurgery
- Finely adjusted instruments with adapted angulations to work in small cavities

endosurgery integral

CHOOSE A COMPLETE KIT DEPENDING ON YOUR LEVEL OF EQUIPEMENT

- The Integral Endosurgery Kit includes all the instruments of the Essential Endosurgery Kit, plus the standard surgery instruments
- Complete, ready-to-use kit compliant with the endodontic surgical protocol

Endosurgery kits

EndoSurgery Essential kit - 11 instruments

- Mini-blade holder
- Flap retractor
- Dual probe (periodontal probe and n.17 explorer)
- Lucas curette
- Inflammatory tissue curette n.1 and n.2
- Pure Reflect® micromirror Ø3mm
- Pure Reflect® micromirror 7x2mm - rectangular
- Micro mirror dual handle
- Filling material spatula
- Dual endo-plugger
- Dual plugger / burnisher instrument and mini-excavator

230XL

EndoSurgery Integral kit - 17 instruments

- Mini-blade holder
- Flap retractor
- Dual probe (periodontal probe and n.17 explorer)

implant remover

Screw and implant extraction kit

- Less traumatizing in implant surgery, they minimize the osseous losses by avoiding bone drilling and surgery during the extraction of an implant.
- Both left and right extractors are screwed and unscrewed alternatively into the implant to gradually separate it from the bone.

SCREW EXTRACTION

Broken screw removal may be caused by:
Excessive tightening force
Wear

IMPLANT EXTRACTION

Complications that may require an implant removal:

- No osteointegration / loss of osteointegration
- Positional anomalie of the implant
- Periimplantitis generating a bone loss

Implant remover kit - long extractors
with 1 sterilization tray, 1 key,
1 adapter, 1 screw extractor, 1 rounded bur

METALLIC TIPS

DID YOU KNOW?

It is impossible to clean correctly the inside of reusable tips due to the presence of biofilm.⁽¹⁾

Metallic tip after 1 year of use

- Not effective cleaning of reusable tips in the long-term.
- Hygiene maintenance takes time between two patients.

With regard to cleaning and sterilization, disposable tips were found to be more acceptable in clinical use than metal tips.⁽¹⁾

riskontrol

Disposable tips

YOUR DAILY ROUTINE

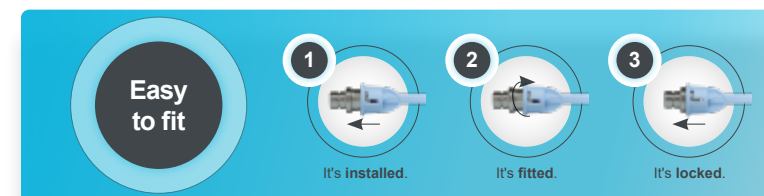

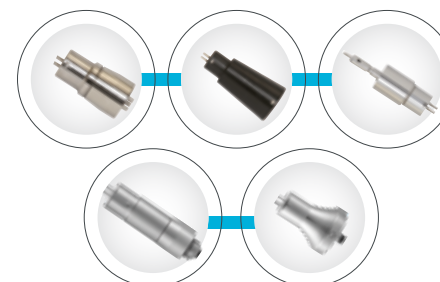

- Save time & money
- Ensure your clinical protection
- Protect your patient
- Meet your expectations for your different procedures
- Easily reach difficult-to-access areas
- Avoid risk of ingestion

Adapters for air/water syringe

The Riskontrol® range includes different adapters able to equip about a large number of dental chairs.

The adapters are delivered with 1 protective cap and, depending on the types, with a replacement O-ring to ensure optimal functioning of your syringe.

Contact your area dealer to determine the correct adapter for your dental chair.

Adapters guide

septol aspiration

Cleaning and disinfection of suction systems in a dental environment.

Microbiological properties

- Bactericidal* according to EN 13727/EN 14561 in 15min, 1%.
- Yeastocidal* according to EN 13624/EN 14562 in 15min, 1%.
- Tuberculocidal* according to EN 14348/EN 14563 in 60min,1,6%.
- Active on enveloped viruses* according to EN 14476/EN 17111 in 15min, 2%.

Instructions for use

Concentrated solution. Prime the associated pump before first use. Dilute at 2% (40ml for 2 litres of water). Rinse the suction system with the diluted solution and aspirate the diluted solution. To achieve efficacy, 15 minutes minimum are required. The solution can be left in the system overnight. To complete the treatment, fill the suction system with at least 1 litre of tap water and aspirate to rinse the suction system. Change the diluted solution at least once per day. Any prolonged exposure to a high temperature (> 35°C) may lead to a change in the colour without altering the antimicrobial performance. Scientific dossier (efficacy, compatibility, etc.) available on request.

Septol™ Aspiration

5 liter-bottle with a 20cc dosing pump

268 297

Class IIa Medical device (GMED) - CE0459 - Manufacturer: DMD - France
Distributed by: PRODUITS DENTAIREs PIERRE ROLLAND - ACTEON® Group - France
Available for sale until stock clearance

septol rotative

Ready-to-use, detergent disinfectant solution for the treatment of burs, rotary and canal instruments prior to sterilisation.

Microbiological properties

- Bactericidal* according to EN 13727/EN 14561 in 5min.
- Yeastocidal* according to EN 13624/EN 14562 in 5min.
- Tuberculocidal* according to EN 14348/EN 14563 in 60min.
- Active against enveloped viruses* according to EN 14476/EN 17111 in 15min.

Instructions for use

Ready-to-use solution. Pour Septol™ Rotative into a dip tank. Do not dilute. Totally immerse the instruments into the solution, cover and leave to soak. Comply with the minimum contact time of 5 minutes. Remove the instruments from the solution. Thoroughly rinse treated medical devices with tap water to remove all traces of product and organic soiling. Properly dry the instruments and prepare them for sterilisation. Replace the solution as soon as it is visibly soiled and at least once per day to maintain the effectiveness of the product. Scientific dossier (efficacy, compatibility, etc.) available on request.

* dirt conditions
Class IIb Medical device (GMED) - CE0459 - Manufacturer: Laboratoires Anios - France
Distributed by: PRODUITS DENTAIREs PIERRE ROLLAND - ACTEON® Group - France
Available for sale until stock clearance

Microbiological properties

- Bactericidal* according to EN 13727/EN 14561 in 5min, 0.5%.
- Yeastocidal* according to EN 13624/EN 14562 in 5min, 0.5%.
- Active on enveloped viruses* according to EN 14476/EN 17111 in 15min, 0.5%.

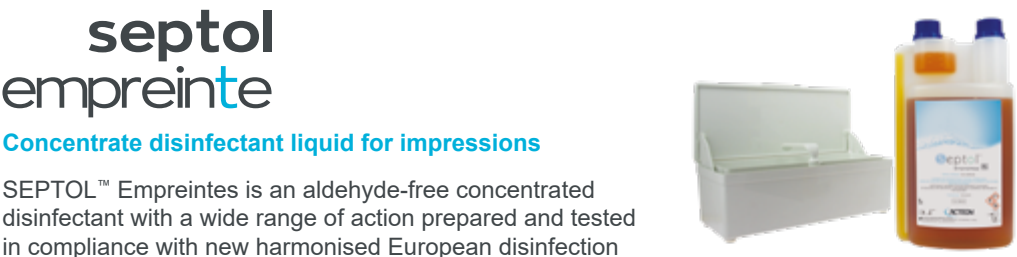

Instructions for use

Concentrated solution. Use for soaking and ultra-sonic bath at a required solution, respecting the minimum contact time. Totally immerse the medical device. Keep the soaking bath covered during the contact time. Brush if visible soiling is present. Thoroughly rinse treated medical devices with tap water to remove all traces of product and organic soiling. Replace the solution as soon as it is visibly soiled and at least once per day to maintain the effectiveness of the product.

Scientific dossier (efficacy, compatibility, etc.) available on request.

SEPTOL™ Empreintes is an aldehyde-free concentrated disinfectant with a wide range of action prepared and tested in compliance with new harmonised European disinfection regulations. SEPTOL™ Empreintes has been designed for high-level, rapid disinfection of impressions (addition and condensation), in silicone, alginate, polyether and polysulphur: the impressions remain unaltered, have no significant dimensional change and are compatible with plasters.

Use

Immediately after taking the impression, rinse the impression under running water for 30 seconds. Inspect the impression to make sure that all visible contamination has been removed. In case of visible contamination repeat rinsing. Place the impression for 10 minutes in a 1% solution bath of SEPTOL™ Empreintes to be added to every litre of water). Remove the impression from the bath and rinse it thoroughly. Follow recommended immersion times as suggested. Replace the disinfectant solution every day, and in any case never disinfect more than 40 impressions with the same solution, in the day. Replace solutions immediately if there is visible contamination (blood, saliva or organ tissue) and/or if the colour/odour of the disinfectant solution changes, as this may interfere with its disinfectant action. Unused disinfectant solutions will remain stable for 7 days if stored in a sealed plastic container (HDPE, GPPS, ABS, PP and PMMA) away from light and heat.

Range of action

Efficacy (microorganisms)	Reference standard	Concentration	Reaction time (minutes)
Bactericidal (S.aureus, P.aeruginosa, E.hirae)	EN 13727	1%	10
Yeastocidal (C.albicans)	EN 13624	1%	10
Tuberculocidal (M.terrae)	EN 14348	1%	10
Virucidal against enveloped viruses including HIV, HBV, HCV	EN 14476	1%	10

Available for sale until stock clearance

septol spray

Disinfection of previously cleaned, nonimmersible, non-invasive, alcohol-resistant medical devices

Microbiological properties

Ready to use solution.

- Bactericide in 5min, 20°C (EN 13727, EN 13697).
- Active against MRSA in 5min, 20°C (EN 13727).
- Yeasticide in 5min, 20°C (EN 13624, EN 13697).
- Mycobactericide in 15min, 20°C (EN 14348).
- Fungicide in 15min, 20°C (EN 13624, EN 13697).
- Active in accordance with EN 14476 in 1min, 20°C, against HIV-1, PRV (surrogate of HBV), BVDV (surrogate of HCV), Vaccinia virus, Herpesvirus.

Instructions for use

Ready to-use solution for professional use. Use on previously cleaned medical devices (MD). Spray on the areas to be treated until they are totally moistened. Apply in sufficient quantity (6ml/m², i.e. approx. 10 sprays). Make sure that the MD remain damp throughout the period of action. Respect the indicated contact time for the required antimicrobial activity. Thoroughly rinse the treated areas intended to come into contact with skin with tap water. For the frequency of use, refer to the hygiene plan in place. Remarks: Before application, check compatibility of the surfaces treated with alcohol. Electrical devices being disinfected must be switched off. Scientific dossier (efficacy, compatibility, etc.) available on request

expasyl

Enhance your impression accuracy

A TRIPLE ACTION

1 ASTRINGENT EFFECT

helps to completely dry the sulcus with no blood or fluids.

2 OPEN THE SULCUS

effectively with no pain or damage to tissues thanks to the viscosity carefully calculated with our clinical expertise.

3 PRESERVE EPITHELIAL ATTACHMENT*

for a reduced risk of gingival recession and bone resorption.

* Canula must not be inserted into the sulcus

EXPASYL™ PASTE USED BY EXPERTS

97% of Expasyl™ paste users **would recommend** this product to a colleague**

93% of Expasyl™ paste users say that **the sulcular opening obtained** with the product **is ideal for impression taking****

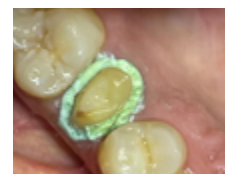

94% of Expasyl™ paste users find that the **application is very easy****

WHY CHOOSE EXPASYL™ RETRACTION PASTE?

Compared to traditional cords, Expasyl™ paste preserves gingival tissues and epithelial attachment.⁽¹⁾ Expasyl™ paste generates pressure 1.7 to 9.2 times greater than other retraction paste available on the market.⁽²⁾

** 2023 survey conducted among 270 French dentists

cav-hycal

Light-curing, radiopaque one-component material containing calcium hydroxide

Indications

Indirect pulp capping
Lining under all filling materials

Advantages

- Effective protection of the pulp
- Ready-to-use one-component material
- Time-saving light-curing and direct application from the syringe
- High level of acid-resistance, protection when applying the total-etch technique
- Supports the formation of tertiary dentine

CAV-Hycal™

2 x 2ml syringes and 20 disposable tips

213 876

Class IIa medical device (MEDCERT) - CE 0482 - Manufacturer: MP Medical Product - Germany
Distributed by: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

coolsin plus

Self-cure resin for temporary bridges and crowns

Indication

Temporary crowns and bridges

Properties

- Natural and aesthetic shades
- Flexural strength > 100 MPa
- Very thin oxygen inhibition layer
- Easy finishing & polishing

COOLSIN™ Plus

1 double cartridge of 50ml, 10 single-use mixing tips

201 070

COOLSIN™ Plus mixing tips x 100

200 073

Class IIa medical device (TUV Rheinland) - CE 0197 - Manufacturer: G-Pharma - France

pr scell glass ionomer

Cementation of crowns, bridges and inlays

Properties

- Excellent handling properties
- Low film thickness
- Less moisture sensitivity during the initial setting stage
- Prolonged working time
- It releases fluoride
- Radiopaque

Complies with ISO 9917-1

"Dentistry - Water-based cements - Part 1: Powder/liquid acid-base cements"

Composition

- Powder: fluoroaluminosilicate glass, excipients
- Liquid: acrylic acid and tricarboxylic acid copolymers, excipients

PR SCELL™ Glass-Ionomer

15g of powder, 8ml of liquid, 1 powder spoon

213 770

Class IIa medical device (GMED) - CE 0459 - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

Available for sale until stock clearance

pr bond

Light & dual-cure desensitizing bonding system

Properties

- Light & dual cure: Used alone, Part A is a light-cure bonding. When mixed with Part B (activator), the bonding system become dual-curing
- Shear strength: ~ 13 Mpa
- No post-operative sensitivity

PR BOND™

2 bottles of liquid (5ml adhesive + 5ml catalyst)

200 948

Class IIa medical device (TUV Rheinland) - CE 0197 - Manufacturer: G-Pharma - France
Distributed by: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

pr etch

Etching gel for the surface treatment of enamel and dentin

Properties

- Thixotropic gel: remains in place on the tooth but rinses off easily and quickly, without leaving residues
- Blue color for a good contrast

Composition

- 38% phosphoric acid

PR ETCH™
4 x 1.5g syringe of gel, 10 disposal needle tips applicators

200 322

Distributed by: PRODUITS DENTAIREs PIERRE ROLLAND - ACTEON® Group - France

quick'n post

Glass fiber endodontic posts and drills

Indication

Posts for dental reconstruction, particularly for teeth with little or no remaining crown tissue

Properties

- Translucent glass fiber
- Conical-cylindrical shape respecting the shape of the root canal
- Highly resistant: modulus of elasticity similar to dentin
- Retentive surface: highly adhesion with cements
- Radiopaque
- Biocompatible
- Single use [posts]
- Easy to identify thanks to its coloured central axis
- Easy to remove, if clinically required, its coloured soft micro-fiber filament permits to guide instruments for drilling it

Composition

- Post: composite reinforced with glass fiber (≈ 70% in vol) in an epoxy resin matrix
- Drill: stainless steel

QUICK'N POST™
Kit: 15 posts (Size 1 x5, size 2 x5, size 3 x5) + 3 drills 251 185

	Posts size 0 x 10 inferior incisors (refill only)	251 189
	Posts size 1 x 10 inferior incisors and first superior premolars	251 186
	Posts size 2 x 10 inferior incisors and first superior premolars	251 187

kite surf putty soft

Addition silicone for precision impressions

Indication

Dual mixture impression (1 step), wash technique impression (2 steps) or triple viscosity impression

Properties

- Hydrophilic
- High viscosity
- Time management (snap-set effect)
- Bubble gum flavour

Composition
Polyvinylsiloxane,
silica, excipients

Kite Surf™ Putty Soft Normal Setting⁽¹⁾
1 x 300ml jar of base, 1 x 300ml jar of catalyst, 2 spoons **281 100**

Kite Surf™ Putty Soft Fast Setting⁽¹⁾
1 x 300ml jar of base, 1 x 300ml jar of catalyst, 2 spoons **281 300**

kite surf putty soft XL

Addition silicone for precision impressions

Indication

Dual mixture impression (1 step), wash technique impression (2 steps) or triple viscosity impression

Properties

- Hydrophilic
- High viscosity
- Time management (snap-set effect)
- Bubble gum flavour
- Cartridges compatible with the most common mixing machines

Composition
Polyvinylsiloxane,
silica, excipients

Kite Surf™ Putty Soft XL Normal Setting⁽¹⁾
2 x 380ml XL cartridges (base and catalyst); 20 mixing tips and 2 locking rings **270 012**

Kite Surf™ Putty Soft XL Fast Setting⁽¹⁾
2 x 380ml XL cartridges (base and catalyst); 20 mixing tips and 2 locking rings **270 004**

Kite Surf™ XL mixing tips⁽²⁾ x 50 **281 524**

kite surf heavy XL

Addition silicone for precision impressions

Indication

For filling impression trays when using the double-mixing technique

Properties

- Heavy bodied consistency, fast setting
- Cartridges compatible with the most common mixing machines

Composition
Polyvinylsiloxane,
silica, catalyst,
excipients

Kite Surf™ Heavy XL⁽¹⁾
2 x 380ml XL cartridges (base and catalyst); 20 mixing tips and 2 locking rings **270 005**

Kite Surf™ XL mixing tips⁽²⁾ x 50 **281 524**

kite surf regular

Addition silicone for precision impressions

Indication

- Corrective impression in the dual mixture technique (suitable for injection)
- Single-phase impression with individual impression carrier

Properties

- Medium viscosity
- Total setting time: 5min 30s

Composition
Polyvinylsiloxane,
silica, catalyst,
excipients

Kite Surf™ Regular Normal Setting⁽¹⁾
2 x 50ml cartridges (base and catalyst) and 12 mixing tips **281 380**

Kite Surf™ Regular mixing tips⁽²⁾ x 48 **281 542**

Kite Surf™ oral tips⁽²⁾ x 96 **281 538**

Kite Surf™ applicator⁽²⁾ **281 532**

(1) Class I medical devices - CE - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France
(2) Class I medical devices - CE - Manufacturer: PHASE - Italy - Distributed by: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

kite surf basic light

Addition silicone for high precision impressions

Indication

Dual mixture impression (1 step), wash technique impression (2 steps)

Properties

- High hydrophily
- Low viscosity
- Time management (snap-set effect)
- Bubble gum flavour

Composition

Polyvinylsiloxane, silica, catalyst, excipients

Kite Surf™ Basic Light Normal Setting⁽¹⁾ 2 x 50ml cartridges (base and catalyst) and 12 mixing tips	281 375

kite surf light

Addition silicone for high precision impressions

Indication

Dual mixture impression (1 step), wash technique impression (2 steps)

Properties

- High hydrophily
- Low viscosity - very fluid consistency
- Time management (snap-set effect)
- Bubble gum flavour

Composition

Polyvinylsiloxane, silica, catalyst, excipients

Kite Surf™ Light Normal Setting⁽¹⁾ 2 x 50ml cartridges (base and catalyst) and 12 mixing tips	281 150
Kite Surf™ Light Fast Setting⁽¹⁾ 2 x 50ml cartridges (base and catalyst) and 12 mixing tips	281 350

Kite Surf™ oral tips⁽²⁾ x 96	281 538
Kite Surf™ applicator⁽²⁾	281 532

kite surf occlusion

Bite registration material

Indication

Bite registration material based (addition curing silicone)

Properties

- Colour: yellow
- Fast setting
- High viscosity
- Easy to use (thixotropic)
- Easy to remove
- High final hardness
- High dimensional stability

Composition

Polyvinylsiloxane, silicone dioxide, excipients

Kite Surf™ Occlusion⁽¹⁾ 2 x 50ml cartridges (base and catalyst), 12 mixing tips and 12 intraoral tips	281 175
Kite Surf™ Regular mixing tips⁽²⁾ x 48	281 542
Kite Surf™ applicator⁽²⁾	281 532

chromalg'x

Alginate-based impression material

Indication
Dental impressions

Properties

- Chromatic alginate: its color changes according to the progression of setting reaction
- Blue color, Raspberry flavour
- Setting time: 2min 20s to 2min 40s
- Complies with Standard ISO 1563: Alginate-based dental impression

Composition
Alginate salts, Mineral charge, Colouring agents and food flavourings

CHROMALG'X™ 1 box containing 2 x 500g bags, powder and water dosing system	263 617
CHROMALG'X™ ECO 1 box, 12 x 500g bags, powder and water dosing system	263 618
CHROMALG'X™ CLINIC 24 x 500g bags, powder and water dosing system	263 619

Class I medical devices - CE - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

pralg'x

Alginate-based impression material

Indication
Dental impressions

Properties

- High resistant alginate
- Setting time: 2min 10s to 2min 30s
- Green colour, Mint flavour
- Complies with Standard ISO 1563: Alginate-based dental impression

Composition
Alginate salts, Mineral charge, Colouring agents and food flavourings

PRALG'X™ 1 box containing 2 x 500g bags, powder and water dosing system	263 614
PRALG'X™ ECO 1 box, 12 x 500g bags, powder and water dosing system	263 615
PRALG'X™ CLINIC 24 x 500g bags, powder and water dosing system	263 616

Class I medical devices - CE - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

orthofast

Alginate-based impression material

Indication
Dental impressions

Properties

- Very short setting time, specially for orthodontics: 1 min 40s to 2min
- Orange colour, Apricot flavour
- Complies with Standard ISO 1563: Alginate-based dental impression

Composition
Alginate salts, Mineral charge, Colouring agents and food flavourings

ORTHOFAST™ 1 box containing 2 x 500g bags, powder and water dosing system	263 621
ORTHOFAST™ ECO 1 box, 12 x 500g bags, powder and water dosing system	263 622
ORTHOFAST™ CLINIC 24 x 500g bags, powder and water dosing system	263 623

Class I medical devices - CE - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

AIR-N-GO® Classic powders	290
AIR-N-GO® Perio powder	290
Sitsalicine™	291

Reverse the irreversible with Curodont™ Repair

Curodont™ Repair is a **unique biomimetic system to arrest and reverse early caries** through Guided Enamel Regeneration.

EFFICACY

93% arrest and regression of initial lesions

FAST APPLICATION

Application completed within 5-10 mins

SATISFACTION

80% of patients have a good experience*

PRODUCTIVITY

Fast application product to perform more treatments

INNOVATION

Patented biomimetic P11-4 Monomer-Peptide formulation

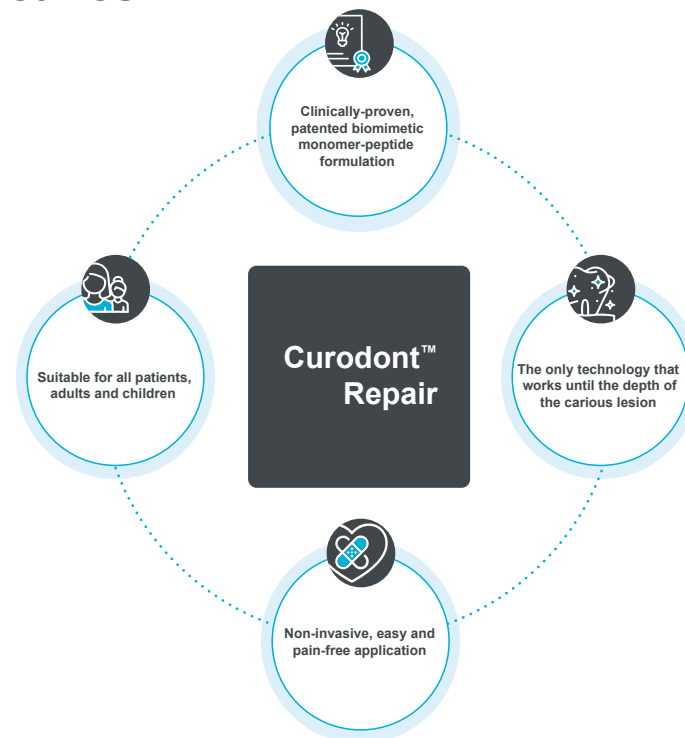

SAFETY

Non-invasive and pain-free treatment

*practitioners feedback

INNOVATION

The solution for initial caries

Visible Evidence

- Reverses the progression of initial caries
- Regenerates enamel
- Deeply remineralizes
- Only one application per lesion, easy-to-use

Day 0

+ 1 month

Curodont™ Repair

sitsalicine

Polishing teeth after scaling

Properties

Silica is a mildly abrasive powder which gives the paste its polishing properties, eliminating the micro-roughness that is present after scaling, without damaging the enamel or gums. A flavouring compound gives its pleasant, refreshing taste.

Sitsalicine™
60g tube

* Mineral Trioxide Aggregate

Flexibility and Precision. Easy root canal irrigation.

FLEXIBILITY

Unlike conventional metal needles, IrriFlex® is made of a soft polypropylene body which is **dentin friendly** and that can easily adapt to complex root canal anatomy, go as close to the apex and **irrigate areas once impossible to reach**.

EFFICIENCY

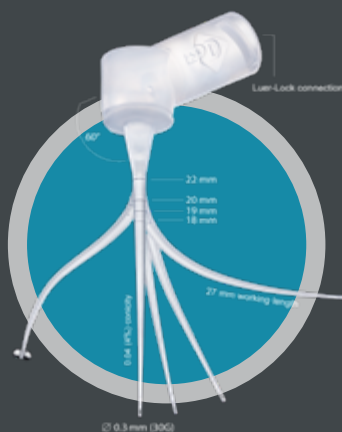

IrriFlex® design encompasses 2-side vents back to back at the tip to deliver **balanced lateral irrigation** and a tapered shape to match root canal preparation and **increase shear stress along the root canal walls**.

The result is **enhanced cleaning and irrigation for an improved removal of residues** such as debris, smear layer and biofilm.

COMFORT

The unique design of IrriFlex® provides an **exceptional glide in the root canal** and improves accessibility. Combining a unique 2-side vent pattern with a tapered shape, that **makes solution delivery remarkably effortless**.

NEW

Flexible needle for advanced root canal irrigation

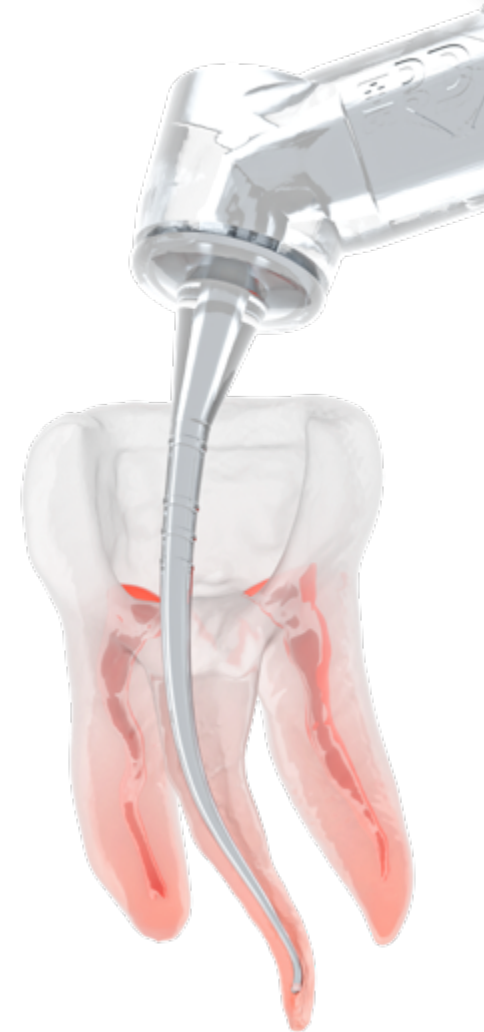

The IrriFlex® flexible needle ensures **safe, effective and complete irrigation of the root canal** to improve the removal of residues such as debris, smear layer and biofilm in areas that cannot be reached with conventional metal needles.*

* IrriFlex, une canule de conception innovante pour l'irrigation canalaire avancée, Dental Tribune France, 2019 March

“

IrriFlex® offers the benefit of being able to be inserted very deeply into the most curved root canals without the risk of extrusion into the periapex. Mounted on a 5 ml Luer-Lock syringe, the orientation of the lateral openings located on the same plane 0.5 mm from its end creates useful shear stress forces to eliminate the smear layer and disorganize bacterial biofilms from the root canal walls.

Prof. Pierre Machtou

IrriFlex®

1 box of 40 flexible needles

21401-001

salvizol E.D.T.A

Root canal irrigant

Properties

Thanks to its chelating properties, SALVIZOL™ E.D.T.A. dissolves the mineralizing screen, facilitating removal of the smear layer. It contains a quaternary ammonium salt to efficiently wet the dentin wall and produce a foam, thus avoiding apical sedimentation of debris. When used in combination with sodium hypochlorite (NaClO), SALVIZOL™ E.D.T.A. makes it possible to obtain clean dentin walls and satisfactory opening of the tubules, so that the canal can then be optimally obturated.

Composition

Edetic acid: 8g/100g under dihemipotassium salt form, excipients

SALVIZOL™ E.D.T.A.
250ml bottle

266 115

Class IIa medical device (GMED) - CE 0459 - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

MTA caps

Endodontic repair cement

Indications

- Root end filling (retrograde)
- Repair of root perforations during root canal therapy
- Pulp capping
- Root end filling (orthograde)

Properties

- Biocompatible
- Barrier impervious to bacteria and fluids
- Radiopaque
- Easy to use
- Delivered under single-use capsules

MTA* CAPS⁽¹⁾

hycal

Ready-to-use calcium hydroxide paste

Indications

Hycal™ is a calcium hydroxide paste indicated for application:

- Direct capping when pulp opened or after pulpotomy.
- Indirect capping for treatment of deep caries.
- Lining of cavities to prevent exposure to acid media when using cements
- Temporary filling of root-canals.

Properties

- Product ready to use.
- High pH (>12.5)
- Effective protection of the pulp.
- Formation of tertiary dentin.
- Radio-opaque.

HYCAL™

1 x 2ml syringe and 5 additional bended application cannulas

cortisomol sp

Powder for permanent sealing cement for root canals

Properties

Permanent root canal sealing allows the tooth to remain functional. The presence of prednisolone acetate (steroidal anti-inflammatory) may help to reduce post-operative pain following endodontic treatment..
In addition, Cortisomol™ SP powder is radiopaque and, although without any colouring agent, its colour makes the canal entry easily visible.
The cement produced must be used in combination with pure eugenol and gutta-percha cones.

Composition

Prednisolone acetate 1.1%; Diiodothymol; Zinc oxide; Barium sulphate; Magnesium stearate; zinc acetate; Silica, colloidal anhydrous; s.q. 100g.

Cortisomol™ SP kit

Jar containing 23g of powder⁽¹⁾; 1 spoon⁽²⁾

sealite regular

Powder and liquid for permanent sealing cement for root canals

Properties

Cement allows the tooth to remain functional.

- Cement that spreads completely into canals
- Very thin film thickness
- Very low disintegration
- Easy to handle: adequate working time, with a setting time that allows placement of gutta cones regardless of the method used
- Radiopaque
- Homogeneous consistency

In compliance with ISO 6876
Must be used with gutta percha cones.

Composition

- Sealite™ Regular powder: Diiodothymol - Zinc oxide - Radio-opacifier - Excipients
- Sealite™ Liquide: Eugenol - Excipients

cimavit photo

Light-curing filling material for temporary restorations

Indications

- Temporary fillings
- Temporary sealing of cavities, especially in inlay / onlay technique

Advantages

- Easy to place – easy to remove in one piece
- No damage to preparation boundaries
- Time-saving and economical
- Durable and saliva-proof
- Specifically useful in inlay / onlay technique

desocclusol orange

Solvent for eugenate root canal filling cements
(zinc oxide/eugenol + gutta-percha)

Properties

Facilitates mechanically the removing of the fillings from the root-canal:

- High dissolving capacity of zinc-oxide / eugenol based cement and gutta percha

Composition

Orange essential oil

Desocclusol™ Orange
14ml bottle

Efficacy & safety for dental anesthesia

As per literature review over the last 10 years⁽¹⁾, articaine has been researched the most and has the **highest efficacy** of amides used in dental local anesthesia.

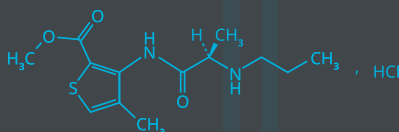

⁽¹⁾ Efficacy of dental local anesthetics: A review, Nelly Badr, Johan Aps, J Dent Anesth Pain Med 2018 December; 18(6): 319-332

primacaine adrénaline

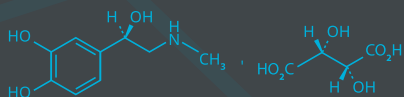

ARTICAINE HYDROCHLORIDE

- Local anesthetic with an amide function
- Interrupts the nerve impulse along the nerve fiber at the injection site

EPINEPHRINE (ADRENALINE) TARTRATE

- Delays the passage of articaine into the systemic circulation and maintains an active tissue concentration
- Little hemorrhagic operative field
- 2 concentrations of adrenaline are proposed: 1/100 000 or 1/200 000
Primacaine™ 1/100 000 is particularly adapted when procedures require a high ischemia

EUROPEAN PHARMACEUTICAL MANUFACTURING

Consistent production and quality process according to international quality standards:

- Raw materials compliant with European Pharmacopoeia
- Constant quality of the finished product
- Long-proven production process compliant to GMP* in force

ASEPTIC MANUFACTURING

- Aseptic filling process
- Undegraded epinephrine (compared to final sterilization process)
- No pH variation for optimal efficiency
- **Less** potentially degradation products

PRODUCT SAFETY

Rigorous quality testing all along the manufacturing process.

Electronic optical control of all the cartridges:

- Maximum reliability
- Constant quality: 1 million cartridges inspected per day

*Good Manufacturing Practice

primacaine adrenaline 1/200 000

Injectable solution for dental use.

Articaine chlorhydrate - Epinephrine (adrenaline) tartrate.

Indication

Local or loco-regional anaesthesia in odonto-stomatological practice.

Its advantages

- Contains 4% Articaine Hydrochloride and 1/200,000 adrenaline
- Less manufacturing stages: Faster manufacturing procedure making it possible to reduce the potential risks of oxidation of the adrenaline
- Sodium edetate-free
- Low Sulphite* content: 0.85mg sodium metabisulphite per cartridge, i.e. 0.337mg/ml in equivalent SO₂

Primacaine™ Adrenaline 1/200 000

Box of 50 cartridges

262 220

Summary of product characteristics at the end of the catalogue.

This product is a medicinal product. Available only if registered by the National Competent Authorities.

Not available in UE except France

* vasoconstrictor preservatives with antioxidant properties

primacaine adrenaline 1/100 000

Injectable solution for dental use.

Articaine chlorhydrate - Epinephrine (adrenaline) tartrate.

Indication

Local or loco-regional anaesthesia in odonto-stomatological practice

This presentation is especially suitable for procedures requiring a high degree of ischaemia

Its advantages

- Contains 4% Articaine Hydrochloride and 1/100,000 adrenaline
- Less manufacturing stages: Faster manufacturing procedure making it possible to reduce the potential risks of oxidation of the adrenaline
- Sodium edetate-free
- Low Sulphite* content: 0.85mg sodium metabisulphite per cartridge, i.e. 0.337mg/ml in equivalent SO₂

Primacaine™ Adrenaline 1/100 000

Box of 50 cartridges

This product is a medicinal product. Available only if registered by the National Competent Authorities.

Not available in UE except France

* vasoconstrictor preservatives with antioxidant properties

xyloroland sans vasoconstricteur

Injectable solution for dental use.

Lidocaine chlorhydrate.

Indication

- Local or loco-regional anaesthesia in odonto-stomatological practice
- This preparation is particularly used when the use of a vasoconstrictor is not recommended

Its advantages

- Contains 2% Lidocaine Hydrochloride
- Low sodium metabisulphite content: 0.15%

Xyloroland™ sans Vasoconstricteur

Box of 50 cartridges

291 462

Summary of product characteristics at the end of the catalogue.

This product is a medicinal product. Available only if registered by the National Competent Authorities.

Not available in UE except France

friljet

Local cryoanaesthesia - Pulp vitality test (cold sensivity)

Indication

- Local cryoanaesthesia for short procedures: abscess incision, extraction of deciduous teeth, roots, pyorrheic teeth, desensitisation of the injection point
- Pulp vitality test: Lowering of the temperature of the dental enamel causes a stimulation of the dental pulp (slight pain) making it possible to check the vitality of the tooth tested.

Properties

The tetrafluoroethane contained in Friljet™ exerts an anaesthetic action by cooling: its fast evaporation from the surface to which it is applied causes a significant reduction of the temperature of this surface for several dozen of seconds. When the temperature reduction reaches the synaptic transmission threshold, surface anaesthesia occurs.

Friljet™

200g (171.5ml) bottle + cannula

239 803

Class IIa medical device (GMED) - CE 0459 - Manufacturer: PRODUITS DENTAIRE PIERRE ROLLAND - ACTEON® Group - France

This product induces a tissue temperature reduction down to - 25°C, and may cause tissue necrosis if the instructions for use are not respected.

Routinely use FRILJET™ with the cannula.

etik

collagene

Hemostatic surgical dressing

Properties

Collagen is a fibrillar protein naturally present in all connective tissues. Lyophilized collagen in cylindrical form displays hemostatic activity due to its adhesive power, liquid absorption and gelification properties. The collagen cylinder moulds itself into the hemorrhagic surface where it adheres strongly upon mechanical compression, thus promoting the formation and maintenance of a platelet clot (coagulation). The collagen cylinders are resorbable.

Composition

Native, non-denatured, lyophilized bovine collagen (mainly type I collagen): 100%. This device contains tissues of animal origin under regulation (EU) no. 722/2012. Dimensions: diameter ≈ 10mm, height ≈ 16mm

Etik™ Collagene

25 unit-packaged sterile cylinders (in blister packs)

281 970

Class III medical device (GMED) - CE 0459 - Manufacturer: PRODUITS DENTAIRES PIERRE ROLLAND - ACTEON® Group - France

hemostasyl

Hemostatic dressing

Indication

To be used in all cases of moderate bleeding occurring in routine dental practice (scaling, etc.)

Properties

- Thixotropic properties
- Good adhesion to the gingival mucosa, without compression
- Presence of aluminum chloride which reinforces its mechanical hemostatic effect
- Placed directly in the mouth with the single-use angled cannula
- Easily located due to its color
- Easily removed by gentle water spray without resumption of bleeding
- Painless on a healthy periodontium
- Contact time: 2 minutes max.

Hemostasyl™ kit

2 x 2g-syringes⁽¹⁾ + 40 cannulas⁽²⁾

aiguilles dentaires stériles

Sterile dental needles

Properties

- European thread hub
- Plastic hub
- Silicone coated
- Triple bevel
- Sterile
- Complies with NF EN ISO 7885 standard "Dentistry - Sterile injection needles for single use"

RISK OF PUNCTURE: Never recap needles by hand. Use only accepted dental recapping procedures. Recapping needles by hand or recapping bent or broken needles can cause unintended needle sticks. In all cases, used needles must be placed in specific containers intended for this purpose, provided for their destruction."

soie dentaire

Non-resorbable silk strands

Indication

Dental suture in dental surgery and stomatology

Properties

- Soie dentaire 3/0: Needle: length 18mm, radius of curvature 3/8ème, non-traumatising triangular shape. Strand: diameter Dec 2, length 45cm.
- Soie dentaire 4/0: Needle: length 12mm, radius of curvature 3/8°, non-traumatising triangular shape. Strand: diameter Dec 1.5, length 45cm.
- Soie Dentaire is non-resorbable silk strands obtained by braiding varying numbers of silk strands depending on the desired thickness. Soie Dentaire is coated with natural wax after braiding. It is black, not very elastic but very flexible. It is easy to handle and improves surgical comfort considerably as it has almost no shape memory.

Composition

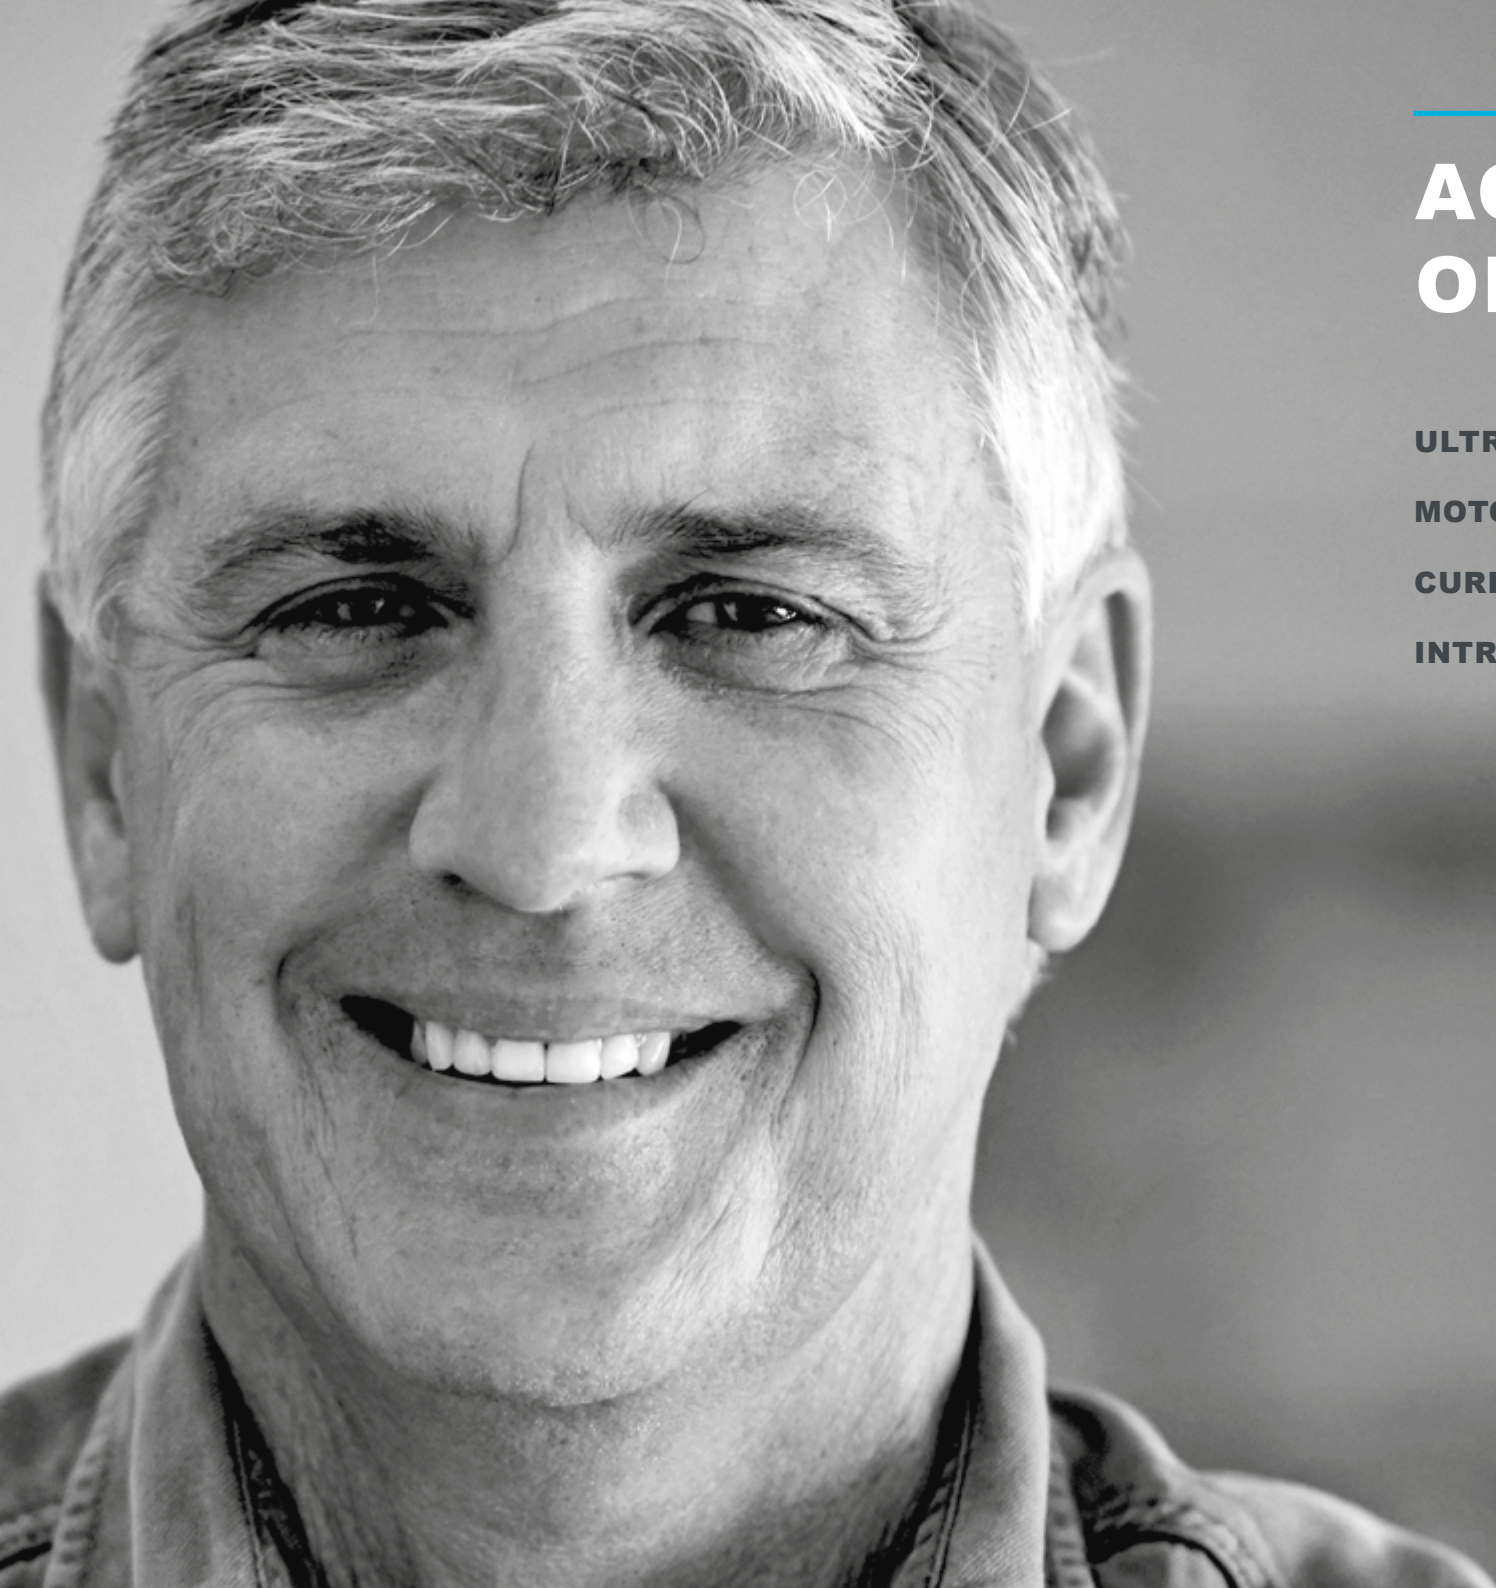

- Needle: stainless steel
- Strand: silk = proteinic fibre (fibroin) made essentially of repeated amino-acids sequences from the unwinding of silkworm's cocoons

Dental Silk sutures 4/0 DEC 1.5 12-pouch case	280 201

PRIMACAINE™**adrénaline 1/100 000****1- DENOMINATION OF THE MEDICINAL PRODUCT**

PRIMACAINE ADRENALINE

1/100 000, injectable solution for dental use.

2- QUALITATIVE AND**QUANTITATIVE COMPOSITION**

Articaine 60.277 mg

in the form of articaine hydrochloride

Adrenaline 0.017 mg

in the form of adrenaline tartrate

for one cartridge of 1.7 ml.

Excipient with a known effect: sodium metabisulphite

For the complete list of excipients, see section 6.1.

3- PHARMACEUTICAL FORM

Injectable solution for dental use.

4- CLINICAL DATA**4.1 Therapeutic indications**

Local or loco-regional anaesthesia in odonto-stomatological practice.

This presentation is particularly adapted when procedures require a high ischemia.

4.2 Dose and mode of administration

Reserved for adult and child over 4 as this type of anaesthesia is unsuitable before this age.

Dose**Adult**

The quantity to be injected will be adapted according to the importance of the intervention.

Usually, half to one cartridge for a common procedure.

Do not exceed the dose of 7mg of articaine hydrochloride per kilogram of bodyweight.

Elderly subject

Administer half of the dose indicated for adults.

**Pediatric population
Child (over 4)**

The quantity to be injected depends on the child's age, weight and the type of procedure performed.

The maximal dose to expect is 5mg of articaine hydrochloride (0.125ml of anaesthetic solution) per kilogram of bodyweight.

The mean dose in mg of articaine hydrochloride that can be administered in a child can be calculated as follow: Child's weight (in kilograms) x 1.33

Mode of administration

LOCAL OR REGIONAL INTRA-ORAL SUBMUCOSAL INJECTION.

Verify the absence of vascular effraction

by repeated aspiration tests, particularly during regional anaesthesia (nerve blocks).

The injection rate must not exceed 1ml of solution per minute.

4.3 Contraindications

This medicinal product is

contraindicated in the case of hypersensitivity to local anaesthetics or to any of the constituents, and in the following situations:

- Severe disorders of atrioventricular conduction without a pacemaker.
- Epilepsy not controlled by treatment.
- Porphyria.

This medicine is usually unadvised in association with sibutramine (see section 4.5).

4.4 Special warnings and precautions for use**Special warnings**

THIS PRODUCT CONTAINS

1/100 000 ADRENALINE.

Take the risk of local necrosis into account in hypertensive or diabetic subjects.

Anaesthesiophagy risks: all kind of bites

(lips, cheeks, mucous, tongue); advise patients to avoid the use of chewing gum or eating food as long as the insensibility persists.

Avoid injection into infected and inflamed areas (decreased efficacy of the local anaesthetic).

Sportsmen will be advised that this medicinal product contains an active substance that can cause a positive reaction on anti-doping control tests.

Pediatric population

The use of this product is not recommended in children under the age of 4 years, as this type of anaesthesia is unsuitable before this age.

Precautions for useThe use of this product requires imperatively:

- to conduct a clinical interview to determine the clinical context, concomitant treatments and the patient's history,
- to perform a test injection of 5 to 10% of the dose in case of allergic risk,
- to perform the injection slowly and strictly outside of the vessels, verifying by repeated aspirations,
- to maintain verbal contact with the patient.

Increased surveillance is required in subjects treated with anticoagulants (surveillance of the INR).

Due to the presence of adrenaline,

precautions and increased surveillance in case of:

- all rhythm abnormalities, except bradycardia;
- coronary insufficiency;
- severe arterial hypertension.

The dose of articaine may need to be decreased in case of severe hepatic insufficiency, due to the mainly hepatic metabolism of amide local anaesthetics.

The dosage must also be decreased in case of hypoxia, hyperkalaemia or metabolic acidosis.

The simultaneous administration of this anaesthetic with some products (see section 4.5) requires a close monitoring of the patient's clinical and biological state.

4.5 Interactions with other drugs or other interactions**Association not recommended**

Due to the presence of adrenaline:

+ Sibutramine: Paroxystic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre).

Associations with precautions for use

Due to the presence of adrenaline:

+ Halogenated volatile anaesthetics: Serious ventricular rhythm abnormalities (increase of the cardiac reactivity). Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Imipraminic anti-depressors:

Paroxystic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre). Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Serotonergic-noradrenergic anti-depressors (described for minalcipran and venlafaxine):

Paroxystic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre). Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Non selective MAOI (iproniazide):

Increase of the adrenaline and nor-adrenaline's pressive action, more often moderated. Use only under strict medicinal control.

+ "A" Selective MAOI (moclobemide, toloxatone) by extrapolation from the

non selective MAOI: Risk of increase of the pressive action. Use only under strict medicinal control.

Associations to take into account

+ Guanethidine: High increase of the blood pressure (hyper reactivity due to the reduction of the sympathetic tonus and/or to the inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre).

4.6 Fertility, pregnancy and breastfeeding**Pregnancy**

The studies carried out on animals do not show any teratogenic effect.

Due to the absence of teratogenic effect on animals, a malformative effect on mankind is not expected. Indeed, until today, the substances responsible of malformations on mankind have been teratogenics on animals during studies carried out on two species.

In clinical practice, there are actually not enough relevant facts to estimate an eventual malformative or foetotoxic effect of the articaine when administered during pregnancy.

Consequently, the use of articaine can be prescribed for odonto-stomatology indications during pregnancy, only if necessary.

Breastfeeding

Like other local anaesthetics, articaine diffuses into breast milk in very small quantities; however, breastfeeding can be continued following the anaesthetic procedure.

4.7 Effects on ability to drive and use machines

PRIMACAINE ADRENALINE

1/100 000 has a moderate influence on the ability to drive and use machines.

4.8 Side effects

Like with all the anaesthetics used in odonto-stomatology, lipothymies can happen.

This product contains sodium metabisulphite, which can involve or worsen anaphylactic reactions and bronchospasms.

In the case of overdose or in certain predisposed patients, the following clinical signs may be observed:

- on the central nervous system: nervousness, agitation, yawning, tremor, apprehension, nystagmus, logorrhoea, headache, nausea, ringing in the ears. In the presence of these warning signs, the patient must be asked to hyperventilate, and attentive surveillance is required to prevent

possible deterioration with seizures followed by CNS depression.

- on the respiratory system: tachypnoea, then bradypnoea, possibly leading to apnoea.

- on the cardiovascular system: tachycardia, bradycardia, cardiovascular depression with arterial hypotension, possibly leading to collapse, arrhythmias (premature ventricular complexes, ventricular fibrillation), disorders of conduction (atrioventricular block).

These cardiac manifestations can lead to cardiac arrest.

Reporting of suspected side effects

The reporting of suspected side effects after approval of the medicinal product is important. It allows continuous monitoring of the benefit/risk ratio of the medicinal product.

Health professionals declare any suspected side effects through the national reporting system.

4.9 Overdose

Toxic reactions, reflecting overdose of local anaesthetic, can occur in two situations: either immediately, due to relative overdose resulting from accidental intravenous injection, or more delayed, corresponding to true overdose due to the use of an excessive quantity of anaesthetic.

Action in case of overdose

As soon as warning signs are observed, ask the patient to hyperventilate, place the patient in the supine position, when necessary. In the case of clonic seizures, oxygenation injection of a benzodiazepine.

Treatment may require intubation with assisted ventilation.

5- PHARMACOLOGICAL PROPERTIES**5.1 Pharmacodynamic properties**Pharmacotherapeutic class: **LOCAL ANAESTHETICS,**ATC Code: **N01BB58****Mechanism of action**

Articaine hydrochloride is an amide local anaesthetic, which blocks propagation of the nerve impulse along the nerve fibre at the site of injection.

The addition of adrenaline (diluted at 1/100 000) to the solution of articaine delays the passage of the articaine into the systemic circulation and maintains an active tissue concentration, allowing to obtain a little hemorrhagic operative field.

Anaesthesia is obtained within 2 to 3

minutes. The duration of anaesthesia allowing the surgical procedure is about 60 minutes. It is 2 to 3 times shorter for pulpar anaesthesia.

**5.2 Pharmacokinetic properties
Distribution**

When injected into the oral mucosa, articaine reaches its peak blood concentration about 30 minutes after injection.

Elimination

The mean elimination half-life of articaine hydrochloride is about 110 minutes.

Articaine hydrochloride is mainly metabolised in the liver; 5 to 10% of the dose are eliminated under unchanged form in the urine.

5.3 Preclinical safety data

Studies carried out on animals have demonstrated the good tolerance of articaine.

Like other amide local anaesthetics, high doses of the active substance can induce toxic reactions on the central nervous system and/or on the cardiovascular system (see section 4.8).

6- PHARMACEUTICAL DATA**6.1 List of excipients**

Sodium chloride, sodium metabisulphite, hydrochloride acid, sodium hydroxide, water for injections.

6.2 Incompatibilities

In the absence of compatibility studies, this medicinal product should not be mixed with other medicinal products.

6.3 Shelf life

Before opening: 2 years.

After opening: the product must be used immediately.

6.4 Special storage precautions

Store at a temperature not exceeding + 25°C.

Store cartridges in the external packaging, away from light.

6.5 Nature and content of external packing

1.7ml in cartridge (type I colourless glass) with a stopper (bromobutyl) and capsule (aluminium) with joint (bromobutyl). Box of 50.

6.6 Special precautions for disposal and handling

Like for all cartridges, the diaphragm will be disinfected just before use. It will be carefully plugged:

- either with ethyl alcohol at 70%,
- or with pure isopropyl alcohol at 90% for pharmaceutical use.

The cartridges must never be plunged in

any solution.

Do not mix the injectable solution with other products in the same syringe. Any opened cartridge of anaesthetic solution must not be re-used.

1/200 000, injectable solution for dental use.

2- QUALITATIVE AND QUANTITATIVE COMPOSITION

Articaïne 60.277 mg

in the form of articaïne hydrochloride

Adrenaline 0.0085 mg

in the form of adrenaline tartrate

for one cartridge of 1.7 ml.

Excipient with a known effect: sodium metabisulphite

For the complete list of excipients, see section 6.1.

3- PHARMACEUTICAL FORM

Injectable solution for dental use.

4- CLINICAL DATA

4.1 Therapeutic indications

Local or loco-regional anaesthesia in odonto-stomatological practice.

4.2 Dose and mode of administration

Reserved for adult and child over 4 as this type of anaesthesia is unsuitable before this age.

Dose

Adult

The quantity to be injected will be adapted according to the importance of the intervention.

Usually, half to one cartridge for a common procedure.

Do not exceed the dose of 7mg of articaïne hydrochloride per kilogram of bodyweight.

Elderly subject

Administer half of the dose indicated for adults.

Pediatric population

Child (over 4)

The quantity to be injected depends on the child's age, weight and the type of procedure performed.

The maximal dose to expect is 5mg of articaïne hydrochloride (0.125ml of anaesthetic solution) per kilogram of bodyweight.

The mean dose in mg of articaïne hydrochloride that can be administered in a child can be calculated as follows: Child's weight (in kilograms) x 1.33

Mode of administration

LOCAL OR REGIONAL INTRA-ORAL SUBMUCOSAL INJECTION.

Verify the absence of vascular effraction by repeated aspiration tests, particularly during regional anaesthesia (nerve blocks).

The injection rate must not exceed 1ml of solution per minute.

4.3 Contraindications

This medicinal product is contraindicated in the case of hypersensitivity to local anaesthetics or to any of the constituents, and in the following situations:

- Severe disorders of atrioventricular conduction without a pacemaker.
- Epilepsy not controlled by treatment
- Porphyria.

This medicine is usually unadvised in association with sibutramine (see section 4.5).

4.4 Special warnings and precautions for use

Special warnings

THIS PRODUCT CONTAINS

1/200 000 ADRENALINE.

Take the risk of local necrosis into account in hypertensive or diabetic subjects.

Anaesthesiophagy risks: all kind of bites (lips, cheeks, mucous, tongue); advise patients to avoid the use of chewing gum or eating food as long as the insensibility persists.

Avoid injection into infected and inflamed areas (decreased efficacy of the local anaesthetic).

Sportsmen will be advised that this medicinal product contains an active substance that can cause a positive reaction on anti-doping control tests.

Pediatric population

The use of this product is not recommended in children under the age of 4 years, as this type of anaesthesia is unsuitable before this age.

Precautions for use

The use of this product requires imperatively:

- to conduct a clinical interview to determine the clinical context, concomitant treatments and the patient's history,
 - to perform a test injection of 5 to 10% of the dose in case of allergic risk,
 - to perform the injection slowly and strictly outside of the vessels, verifying by repeated aspirations,
 - to maintain verbal contact with the patient.
- Increased surveillance is required in subjects treated with anticoagulants (surveillance of the INR).
- Due to the presence of adrenaline, precautions and increased surveillance in case of:
- all rhythm abnormalities, except

bradycardia;
• coronary insufficiency;
• severe arterial hypertension.
The dose of articaïne may need to be decreased in case of severe hepatic insufficiency, due to the mainly hepatic metabolism of amide local anaesthetics. The dosage must also be decreased in case of hypoxia, hyperkalaemia or metabolic acidosis.

The simultaneous administration of this anaesthetic with some products (see section 4.5) requires a close monitoring of the patient's clinical and biological state.

4.5 Interactions with other drugs or other interactions

Associations not recommended

Due to the presence of adrenaline:

• **+ Sibutramine:** Paroxysmic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre).

Association with precautions for use

Due to the presence of adrenaline:

• **+ Halogenated volatile anaesthetics:** Serious ventricular rhythm abnormalities (increase of the cardiac reactivity). Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Imipraminic anti-depressors:

Paroxysmic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre).

Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Serotonergic-noradrenergic anti-depressors (described for

minalcipran and venlafaxine):

Paroxysmic hypertension with possibility of rhythm abnormalities (inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre). Limit the dose, for example: less than 0.1mg of adrenaline in 10 minutes or 0.3mg in one hour in adult.

+ Non selective MAOI (iproniazide):

Increase of the adrenaline and nor-adrenaline's pressive action, more often moderated. Use only under strict medicinal control.

• **+ "A" Selective MAOI (moclobemide, tolaxatone) by extrapolation from the non selective MAOI:** Risk of increase of the pressive action. Use only under strict medicinal control.

Associations to take into account

• **+ Guanethidine:** High increase of the blood pressure (hyper reactivity due to the reduction of the sympathetic tonus and/or to the inhibition of the adrenaline or nor-adrenaline's entrance in the sympathetic fibre).

4.6 Fertility, pregnancy and breastfeeding

Pregnancy

The studies carried out on animals do not show any teratogenic effect.

Due to the absence of teratogenic effect on animals, a malformative effect on mankind is not expected. Indeed, until today, the substances responsible of malformations on mankind have been teratogenics on animals during studies carried out on two species.

In clinical practice, there are actually not enough relevant facts to estimate an eventual malformative or foetotoxic effect of the articaïne when administered during pregnancy.

Consequently, the use of articaïne can be prescribed for odonto-stomatology indications during pregnancy, only if necessary.

Breastfeeding

Like other local anaesthetics, articaïne diffuses into breast milk in very small quantities; however, breastfeeding can be continued following the anaesthetic procedure.

4.7 Effects on ability to drive and use machines

PRIMACAINE ADRENALINE

1/200 000 has a moderate influence on the ability to drive and use machines.

4.8 Side effects

Like with all the anaesthetics used in odonto-stomatology, lipothymies can happen.

This product contains sodium metabisulphite, which can involve or worsen anaphylactic reactions and bronchospasms.

In the case of overdose or in certain predisposed patients, the following clinical signs may be observed:

- on the central nervous system: nervousness, agitation, yawning, tremor, apprehension, nystagmus, logorrhoea, headache, nausea, ringing in the ears. In the presence of these warning signs, the patient must be asked to hyperventilate, and attentive surveillance is required to prevent possible deterioration with seizures followed by CNS depression.
- on the respiratory system: tachypnoea, then bradypnoea, possibly leading to

apnoea.

- on the cardiovascular system: tachycardia, bradycardia, cardiovascular depression with arterial hypotension, possibly leading to collapse, arrhythmias (premature ventricular complexes, ventricular fibrillation), disorders of conduction (atrioventricular block).

These cardiac manifestations can lead to cardiac arrest.

Reporting of suspected side effects

The reporting of suspected side effects after approval of the medicinal product is important. It allows continuous monitoring of the benefit/risk ratio of the medicinal product.

Health professionals declare any suspected side effects through the national reporting system.

4.9 Overdose

Toxic reactions, reflecting overdose of local anaesthetic, can occur in two situations: either immediately, due to relative overdose resulting from accidental intravenous injection, or more delayed, corresponding to true overdose due to the use of an excessive quantity of anaesthetic.

Action in case of overdose

As soon as warning signs are observed, ask the patient to hyperventilate, place the patient in the supine position, when necessary. In the case of clonic seizures, oxygenation injection of a benzodiazepine.

Treatment may require intubation with assisted ventilation.

5- PHARMACOLOGICAL PROPERTIES

5.1 Pharmacodynamic properties

Pharmacotherapeutic class: **LOCAL ANAESTHETICS,**

ATC Code: **N01BB58**

Mechanism of action

Articaïne hydrochloride is an amide local anaesthetic, which blocks propagation of the nerve impulse along the nerve fibre at the site of injection.

The addition of adrenaline (diluted at 1/200 000) to the solution of articaïne delays the passage of the articaïne into the systemic circulation and maintains an active tissue concentration, allowing to obtain a little hemorrhagic operative field.

Anaesthesia is obtained within 2 to 3 minutes. The duration of anaesthesia allowing the surgical procedure is about 60 minutes.

It is 2 to 3 times shorter for pulpar anaesthesia.

5.2 Pharmacokinetic properties

Distribution

When injected into the oral mucosa, articaine reaches its peak blood concentration about 30 minutes after injection.

Elimination

The mean elimination half-life of articaine hydrochloride is about 110 minutes.

Articaine hydrochloride is mainly metabolised in the liver; 5 to 10% of the dose are eliminated under unchanged form in the urine.

5.3 Preclinical safety data

Studies carried out on animals have demonstrated the good tolerance of articaine. Like other amide local anaesthetics, high doses of the active substance can induce toxic reactions on the central nervous system and/or on the cardiovascular system (see section 4.8).

6- PHARMACEUTICAL DATA

6.1 List of excipients

Sodium chloride, sodium metabisulphite, hydrochloride acid, sodium hydroxide, water for injections.

6.2 Incompatibilities

In the absence of compatibility studies, this medicinal product should not be mixed with other medicinal products.

6.3 Shelf life

Before opening: 2 years.

After opening: the product must be used immediately.

6.4 Special storage precautions

Store at a temperature not exceeding + 25°C.

Store cartridges in the external packaging, away from light.

6.5 Nature and content of external packing

1.7ml in cartridge (type I colourless glass) with a stopper (bromobutyl) and capsule (aluminium) with joint (bromobutyl). Box of 50.

6.6 Special precautions for disposal and handling

Like for all cartridges, the diaphragm must be disinfected just before use. It will be carefully plugged:

- either with ethyl alcohol at 70%,
- or with pure isopropyl alcohol at 90% for pharmaceutical use.

The cartridges must never be plunged in any solution.

Do not mix the injectable solution with other products in the same syringe. Any opened cartridge of anaesthetic solution must not be re-used.

CONDITIONS OF PRESCRIPTION AND DELIVERY IN FRANCE

List I.

Medicinal product reserved for professional use according to article R.5121-80 of the French public health code.

XYLOROLLAND™

sans vasoconstricteur

1- DENOMINATION OF THE MEDICINAL PRODUCT

XYLOROLLAND SANS VASOCONSTRICTEUR, injectable solution for dental use.

2- QUALITATIVE AND

QUANTITATIVE COMPOSITION

Lidocaine hydrochloride

36,00000mg

for one cartridge containing 1.8ml.

The sodium metabisulphite content, expressed as sulphur anhydride, is 1.8mg per ampoule.

Excipient with a known effect: sodium metabisulphite
For the complete list of excipients, see section 6.1.

3- PHARMACEUTICAL FORM

Injectable solution for dental use.

4- CLINICAL DATA

4.1 Therapeutic indications

Local or loco-regional anaesthesia in odonto-stomatological practice.

This preparation is particularly

used when the administration of a vasoconstrictor is inadvisable.

4.2 Dose and mode of administration

Reserved for adult and child over 4 as this type of anaesthesia is unsuitable before this age.

Dose

Adult

The quantity to be injected will be adapted according to the importance of the intervention.

Do not exceed the dose of 300mg of lidocaine hydrochloride per session.

Elderly subject

Administer half of the dose indicated for adults.

Pediatric population

Child (over 4)

The quantity to be injected depends on the child's age, weight and the type of procedure performed.

The maximum dose to predict is 20 to 30mg of lidocaine hydrochloride per session.

Do not exceed 2.2mg of lidocaine hydrochloride per kilogram of body weight.

Mode of administration

LOCAL OR REGIONAL INTRA-ORAL SUBMUCOSAL INJECTION.

Verify the absence of vascular effraction by repeated aspiration tests, particularly during regional anaesthesia (nerve blocks).

The injection rate must not exceed 1ml

of solution per minute.

4.3 Contraindications

This medicinal product is contraindicated in the case of hypersensitivity to local anaesthetics or to any of the constituents, and in the following situations:

- Severe disorders of atrioventricular conduction without a pacemaker.
- Epilepsy not controlled by treatment
- Intermittent acute porphyria.

4.4 Special warnings and precautions for use

Special warnings

Anaesthesiophagy risks: all kind of bites (lips, cheeks, mucous, tongue); advise patients to avoid the use of chewing gum or eating food as long as the insensibility persists.

Avoid injection into infected and inflamed areas (decreased efficacy of the local anaesthetic).

Sportsmen will be advised that this medicinal product contains an active substance that can cause a positive reaction on anti-doping control tests.

Pediatric population

The use of this product is not recommended in children under the age of 4 years, as this type of anaesthesia is unsuitable before this age.

Precautions for use

The use of this product requires imperatively:

- to conduct a clinical interview to determine the clinical context, concomitant treatments and the patient's history;
- to perform a test injection of 5 to 10% of the dose in case of allergic risk,
- to perform the injection slowly and strictly outside of the vessels, verifying by repeated aspirations,
- to maintain verbal contact with the patient.

Increased surveillance is required in subjects treated with anticoagulants (surveillance of the INR).

Doses of lidocaine may need to be decreased in the case of severe hepatic insufficiency, due to the mainly hepatic metabolism of amide local anaesthetics. The dosage must also be decreased in the case of hypoxia, hyperkalaemia or metabolic acidosis.

4.5 Interactions with other drugs or other interactions

Not applicable.

4.6 Fertility, pregnancy and breastfeeding

Pregnancy

No reliable animal teratogenesis data are available.

In clinical practice, analysis of a large number of pregnancies exposed to lidocaine did not reveal any particular foetotoxic or malformative effect for lidocaine. However, only epidemiological studies can confirm the absence of risk. Consequently, the use of lidocaine can be prescribed for odonto-stomatology indications during pregnancy, only if necessary.

Breastfeeding

Like other local anaesthetics, lidocaine diffuses into breast milk in very small quantities; however, breastfeeding can be continued following the anaesthetic procedure.

4.7 Effects on ability to drive and use machines

XYLOROLLAND SANS

VASOCONSTRICTEUR has a moderate influence on the ability to drive and use machines.

4.8 Side effects

Due to the presence of sodium metabisulphite, risk of allergic reactions, as well as anaphylactic reactions and bronchospasms.

Like with all the anaesthetics used in odonto-stomatology, lipothymies can happen.

In the case of overdose or in certain predisposed patients, the following clinical signs may be observed:

- on the central nervous system: nervousness, agitation, yawning, tremor, apprehension, nystagmus, logorrhoea, headache, nausea, ringing in the ears. In the presence of these warning signs, the patient must be asked to hyperventilate, and attentive surveillance is required to prevent possible deterioration with seizures followed by CNS depression.
- on the respiratory system: tachypnoea, then bradypnoea, possibly leading to apnoea.
- on the cardiovascular system: tachycardia, bradycardia, cardiovascular depression with arterial hypotension, possibly leading to collapse, arrhythmias (premature ventricular complexes, ventricular fibrillation), disorders of conduction (atrioventricular block).

These cardiac manifestations can lead to cardiac arrest.

Reporting of suspected side effects

The reporting of suspected side effects after approval of the medicinal product

is important. It allows continuous monitoring of the benefit/risk ratio of the medicinal product. Health professionals declare any suspected side effects through the national reporting system.

4.9 Overdose

Toxic reactions, reflecting overdose of local anaesthetic, can occur in two situations: either immediately, due to relative overdose resulting from accidental intravenous injection, or more delayed, corresponding to true overdose due to the use of an excessive quantity of anaesthetic.

Action in case of overdose

As soon as warning signs are observed, ask the patient to hyperventilate, place the patient in the supine position, when necessary. In the case of clonic seizures, oxygenation injection of a benzodiazepine.

Treatment may require intubation with assisted ventilation.

5- PHARMACOLOGICAL PROPERTIES

5.1 Pharmacodynamic properties

Pharmacotherapeutic class: **LOCAL ANAESTHETICS**,

ATC Code: **N01BB02**

Mechanism of action

Lidocaine hydrochloride is an amino-amide local anaesthetic, which blocks propagation of the nerve impulse along the nerve fibre at the site of injection. Anaesthesia is obtained within 2 to 3 minutes. The duration of anaesthesia allowing the surgical procedure is about 90 to 120 minutes and 5 to 10 minutes on the pulp.

5.2 Pharmacokinetic properties

Distribution

When injected into the oral mucosa, lidocaine reaches a peak blood concentration about 10 to 15 minutes after injection.

Elimination

The mean elimination half-life of lidocaine hydrochloride is about 90 minutes.

Lidocaine hydrochloride is mainly metabolised in the liver; 5 to 10% of the dose are eliminated under unchanged form in the urine.

5.3 Preclinical safety data

Studies carried out on animals have demonstrated the good tolerance of lidocaine. Like other amide local anaesthetics, high doses of the active substance can induce toxic reactions on the central nervous system and/or on the cardiovascular system (see section 4.8).

6- PHARMACEUTICAL DATA**6.1 List of excipients**

Sodium chloride, sodium metabisulphite, sodium hydroxide, water for injections.

Inertizing gas: nitrogen

6.2 Incompatibilities

In the absence of compatibility studies, this medicinal product should not be mixed with other medicinal products.

6.3 Shelf life

Before opening: 3 years.

After opening: the product must be used immediately.

6.4 Special storage precautions
